

It Enters Your Body 24
Hours A Day...And It
Could Be Making You
Sick...

HealthSmart Filter

US Patents #5,525,136, 6,007,596

We all know how important nutritious food and clean drinking water are to our health. However, rarely do we consider another major health factor we cannot see, touch, or taste: the air we breathe.

Medical studies confirm that many people unknowingly breathe "sick" air in their homes and offices every day...air that contains common microscopic elements such as pollen, dust mites, and bacteria.

As this polluted air is absorbed into our skin, lungs, and blood cells, it often causes or aggravates allergic reactions, headaches, fatigue, recurring colds, breathing difficulties, dizziness, nausea, and serious respiratory diseases.

Dust Mites- a common indoor allergen

7 Million

"Air pollution has actually been recorded to be the worlds' largest environmental health risk, causing about 7 million deaths annually as of 2012."
--World Health Organization

The problem with "most" furnace filters

Airflow naturally seeks the path of least resistance. Since thin cardboard furnace filters provide a poor perimeter seal, as they get dirty, the resistance across the furnace filter increases.

This causes pollution to leak around the furnace filters edges, thereby completely avoiding air filtration.

HealthSmart Filter

US Patents #5,525,136, 6,007,596

HealthSmart Filters are next-generation air filters, unlike anything you've seen in stores. They have been available for years, but only through professional service companies.

Designed specifically for the protection of human health; they replace your existing A/C or furnace filter. Once installed, this air filter will transform the quality of the air you breathe. We guarantee you will love this air filter.

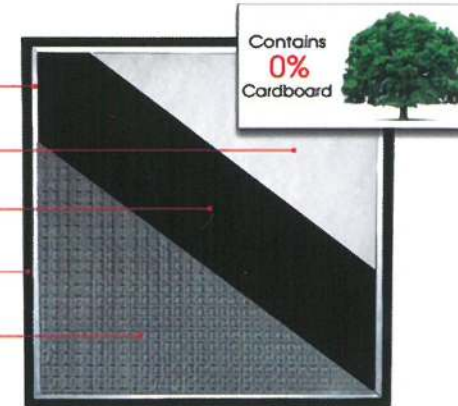

Reusable aluminum frame

Advanced air filtration media

Odor/V.O.C. media

Leak-Guard Seal

Electrostatic screen

Contains 0% Cardboard

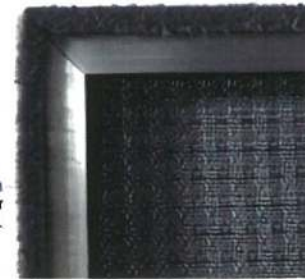

Leak-Guard Protection

Air will take the path of least resistance, every time.

To ensure that all the air and pollutants go through your air filter and not around it, HealthSmart Filters feature a patented Leak-Guard Seal. When your air conditioner or furnace turns on, the difference in pressure causes an airtight seal. No bypass means you're filtering 100% of the air. That means the harmful particles get trapped in the air filter, rather than in the lungs of you and your family.

Rubber
Recommended for filters that are placed in grills.

Brush
Recommended for filters that slide in tracks.

The Perfect Combination

Reusable aluminum frame – you simply insert fresh filter media pads quickly and easily.

Pads last up to (2) months on average – and fresh refills are delivered right to your door.

No more aggravating trips to the store searching for the correct size filter.

Fits all makes & models

Germ Fighting Filters

BioSponge® filter media with its AEGIS microbe shield, when tested, reduced airborne micro-organisms by up to 86.5% in a single pass through the filter!

IT'S TIME TO BREATHE BETTER

Are you breathing healthy air?

Air Conditioning Coil

Clean A/C

Contaminated A/C

Physician Approved

"I recommend the HealthSmart Filter to all my patients. It is the most effective air filter I have ever used in removing airborne contaminants."

Herbert R. Slavin, M.D.
The Institute of Advanced Medicine

HealthSmart air filters may be tax deductible or qualify for reimbursement under your healthcare plan.
